

HEATER GUIDE

Keep your party goers warm in cold or cool weather with this High Efficiency Premier 170K BTU Propane Tent Heater. Quiet operation, safe, dependable heating circulation for any tented event.

Here are some instructions for operating propane tent heaters:

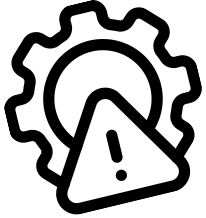

- 1:** Slowly open the propane tank (turn valve counter clockwise) until fully open. If 2 tanks are used, open both tanks. **NOTE: If valve is open too quick, it may trip a safety in the heater so that it may not start or shut down the unit. See troubleshooting on next page.**
- 2.** Turn heater on (switch is located on side of unit) to "HEAT" and set thermostat in the tent to desired temperature above 70. Heater will turn off when desired temp is reached and turn back on when temp falls below the indicated level.
- 3.** To turn unit off, turn switch to "OFF" and close valve on propane tank.

*****AFTER THE TEAM SETS UP THE HEATER, PLEASE REFRAIN FROM MOVING OR UNPLUGGING IT, AS DOING SO MAY CAUSE POTENTIAL ISSUES.*****

HEATER GUIDE cont.

TROUBLE-SHOOTING

Heater does not go on:

- Check electrical supply - make sure unit is plugged in. Also, check that your breaker has not flipped.
- Check propane tanks - make sure valve is open and tanks have propane in them.

Heater is connected and set up properly, but unit still does not go on:

- See if the RED L.E.D. light is on or flashing. If constantly on = normal operation.
- If flashes 3X in a sequence: No fuel, high limit switch tripped, defective sensor of safety. Open door on both sides, find the red button to reset high limit switch.
- If flashes 4X in a sequence: Bad control board - call for service.

IN CASE OF SNOW, PLEASE TURN ON THE HEATERS SO THAT THE SNOW ON TOP OF THE TENT WILL MELT.

SAFETY

1. Use in ventilated areas only.
2. Discontinue or do not use if propane gas is smelled or detected.
3. Do not leave unattended while using.
4. Always THINK of SAFETY first when using heaters and related equipment and products.
